The climate challenge

What do we mean by emissions?

For road transport projects

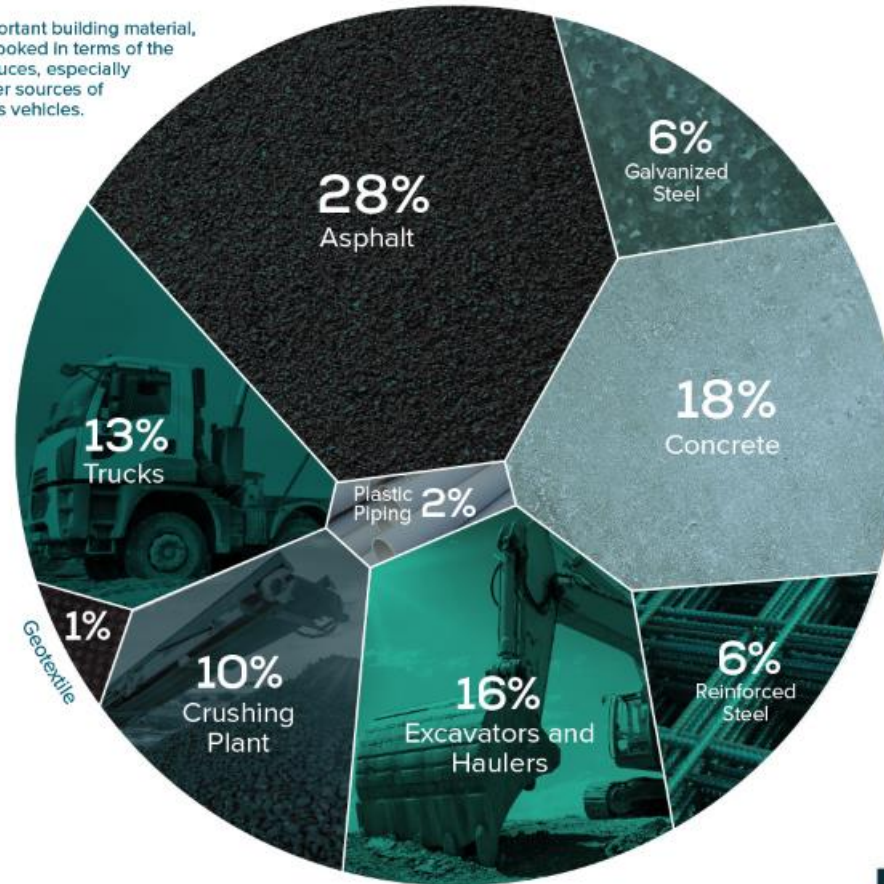

Construction (embodied) emissions – emissions released while the infrastructure is being built	Operational emissions – emissions created to keep the infrastructure up and running	Enabled emissions - those created by the vehicles using the infrastructure
 <p>Construction materials (extraction and manufacturing)</p>	 <p>Materials, including re-sealing</p>	 <p>Emissions from vehicles using infrastructure</p>
 <p>Transport of materials</p>	 <p>Maintenance fuel use</p>	 <p>Avoided emissions from increased active transport and PT patronage</p>
 <p>Onsite fuel and electricity use</p>	 <p>Electricity use (eg. Traffic and street lights)</p>	

USA View Emissions from Construction

EMISSIONS FROM ROAD CONSTRUCTION KtCO₂e*

Asphalt is an important building material, but is often overlooked in terms of the emissions it produces, especially compared to other sources of emissions such as vehicles.

Asphalt-paved surfaces make up approximately 45% of surfaces in U.S. cities.

Pollution from vehicles is declining in many places, as internal combustion vehicles are replaced with electric vehicles.

But pollution from asphalt could actually increase in the next decades because of higher temperatures in some parts of the Earth.

Source: Chalmers University of Technology, University of Gothenburg.
*Kilotonnes of carbon dioxide equivalent.
Emissions based on the construction of a 8km stretch of road.

Our Carbon Equation

Management

- Task-oriented
- Transactional
- Doing things right
- Events and tasks
- Rational thinking
- Instructs people
- Cognitive intelligence
- Relies on authority
- Push-approach
- Status quo

Leadership

- People-oriented
- Transformational
- Doing the right things
- Attitudes and behaviours
- Inspirational and visionary
- Listens and empowers
- Emotional Intelligence
- Leads through others
- Asks people
- Pull-approach
- Risk taking

Manage tasks and lead people

6+3=9

but so does 5+4.

**The way you do things isn't always
the only way to do them.**

**Respect other people's
way of thinking.**

People First - Higher Competency Leads to Lower Carbon Emissions

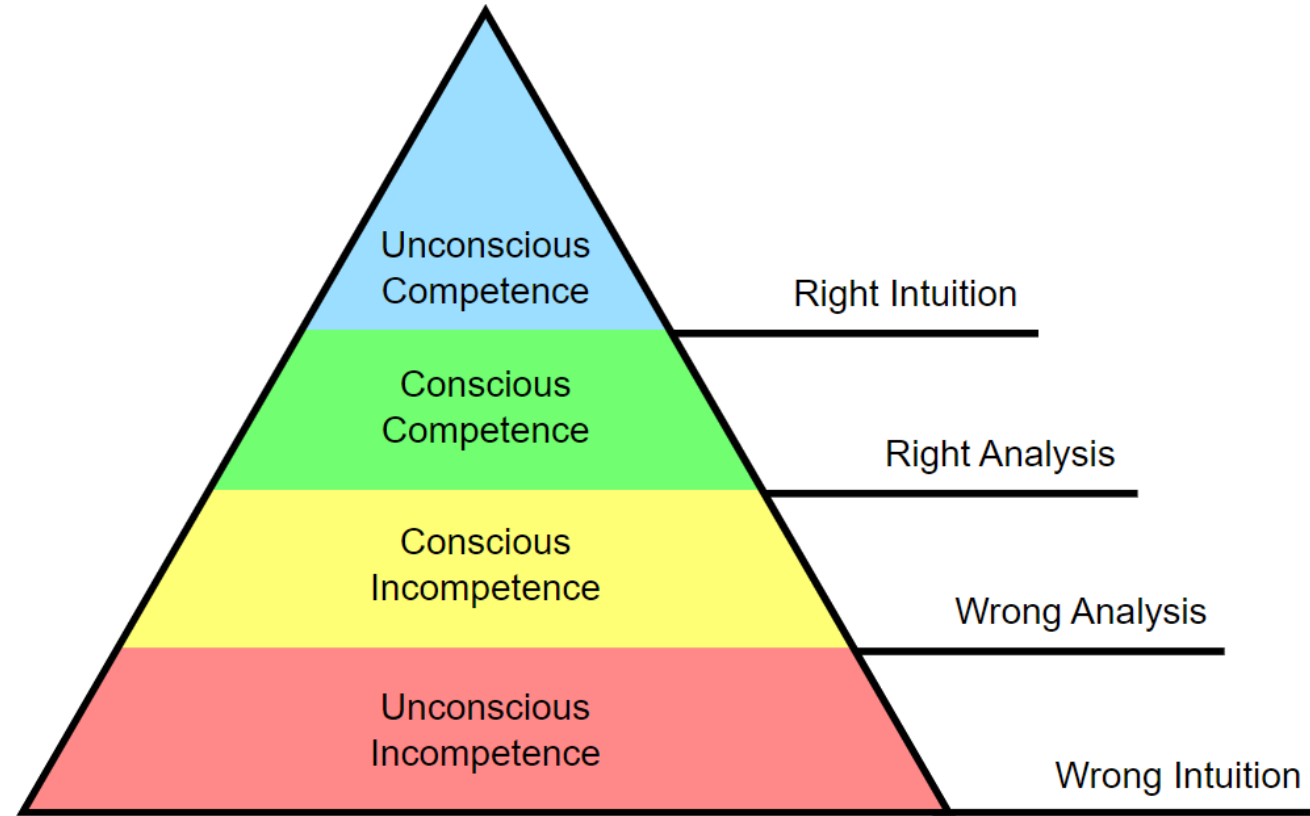

- Thoughts leaders are standing up and owning accountability for lowering carbon emissions.
- This is putting people first and empowering them to make a difference.
- Each person in this room today is able to make better decisions relating to carbon emissions.
- Activity Managers can lower emission in both the operation and renewals of assets.

"We are living
on this planet
as if we had
another one to
go to."

Where do your asset management skills sit?

Hierarchy of Competence

Competence_Hierarchy_adapted_from_Noel_Burch_by_Igor_Kokcharov

Different Thinking is Needed

Concrete by Volume

Concrete by Carbon

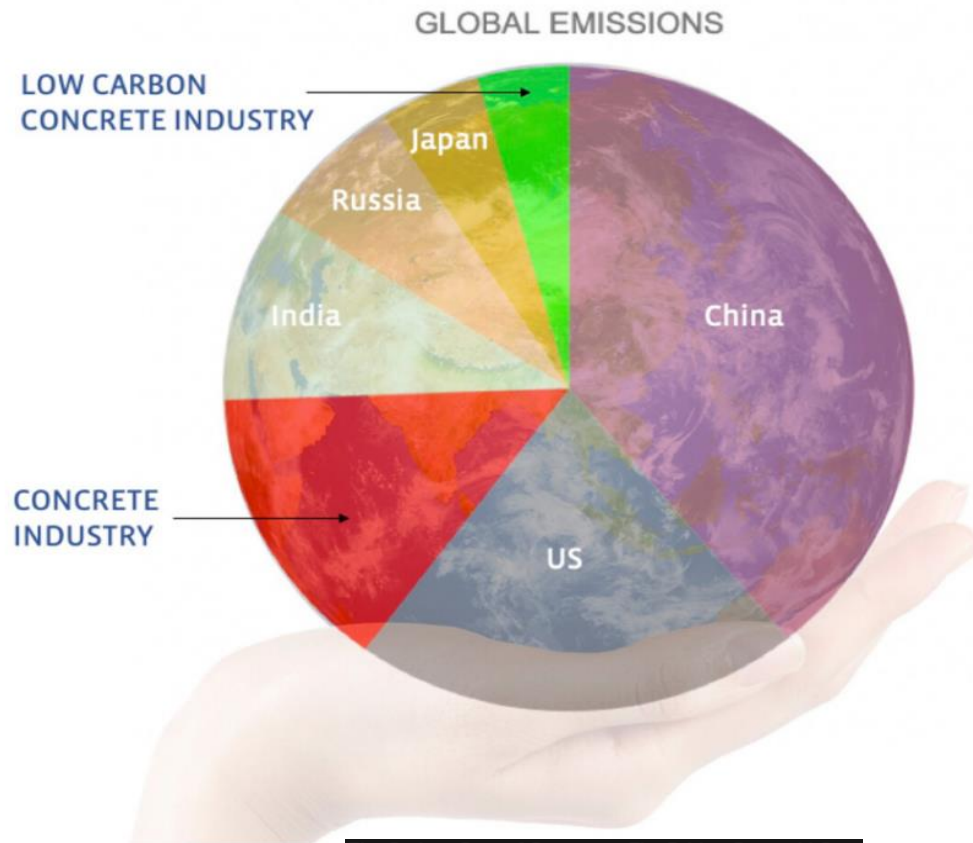

Decarbonising materials: The pathway to low or zero carbon concrete

Our Carbon Equation

Different Thinking is Needed

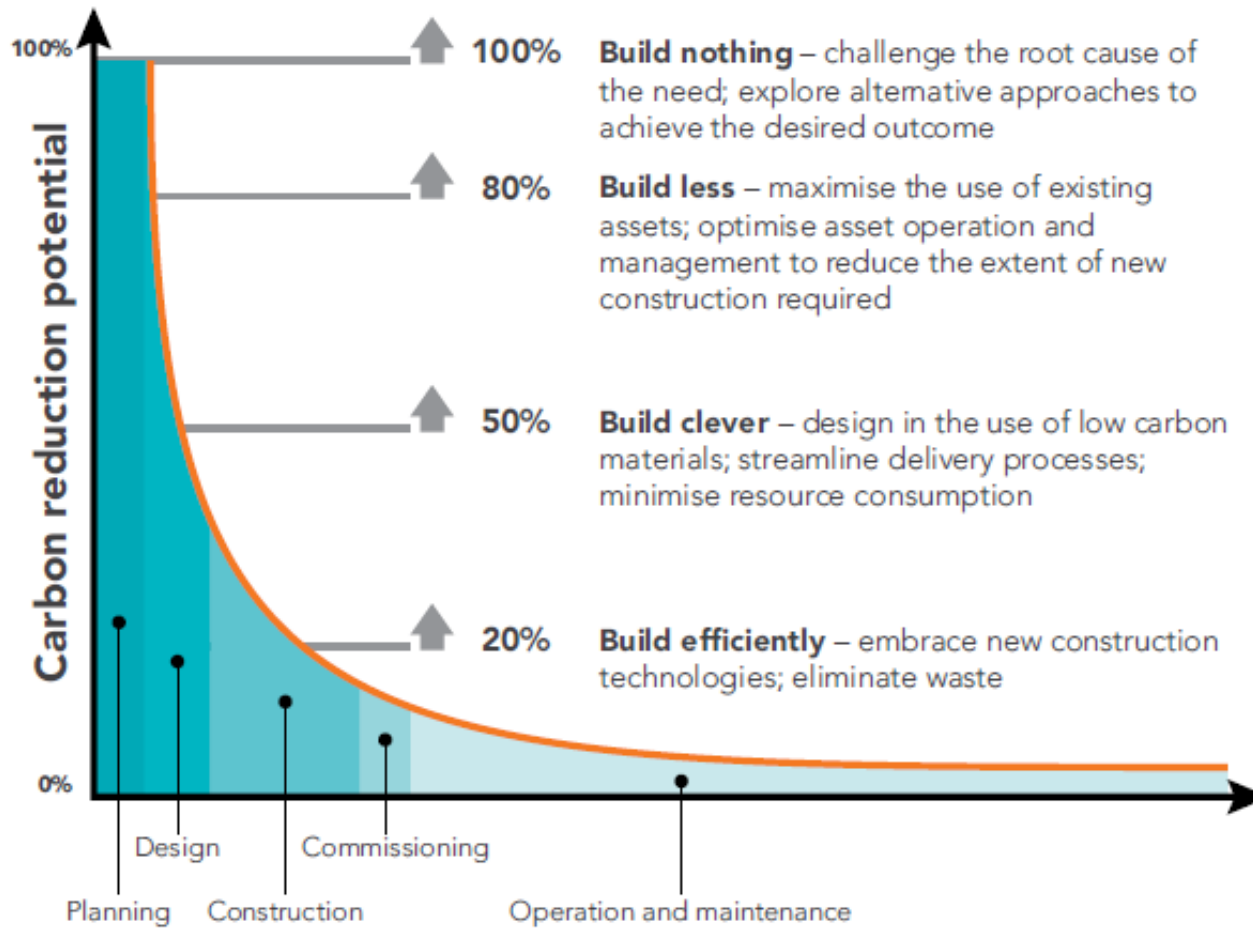

THE HIGH IMPACT OF LOW CARBON CONCRETE

The Carbon Cost of Concrete - The Bridge Group, LLC

Carbon Reduction Potential

The greatest opportunities to reduce whole of life embodied carbon and operational carbon are at the planning and design phases of a project.

Our Carbon Equation

What will the future look like?

A typical working day in Oxford Street at the end of the 19th century, looking east, with New Bond Street off to the right. We can see omnibuses, hansom cabs, and delivery carts.

Our Carbon Equation

What will the future look like?

Our Carbon Equation

Advanced Air Mobility? Brazil 2026?

Helisul Aviation, a Brazilian helicopter charter operator, intends to use Eve's eVTOL aircraft for air taxi services in Brazilian cities from 2026. (Image: Eve Urban Air Mobility Solutions).

Advanced Air Mobility? California 2024?

Archer on track to complete type certification of the full-scale, four-passenger aircraft by the end of 2024

Our Carbon Equation

New Zealand Innovation – Sacha Wetzel, founder of Avfoil, has some ideas on urban aviation.... What if we didn't need to build and maintain as many roads?

- Electric rotary wing drones are becoming a more and more viable possibility for transporting people.
- Safety is paramount – few hazards exist more than 100m into the air. Technology is such that unpiloted vehicles can remove human error – the cause of most accidents. (The road to zero, more quickly?)
- Sea level rise is threatening many state highways in New Zealand.
- Our thinking is changing to shared asset use rather than ownership – do we need a car or can we Uber?
- Investing in the vehicle rather than the asset – a different thinking? A more cost-effective solution as the technology continues to evolve?

Different Thinking is Needed

Our Carbon Equation

Making It Real

How can we make a meaningful difference?

- Knowing and understanding our current skill set
- Finding and fixing any relevant skill deficiencies
- Taking the time to stop, think and apply what we know through a different paradigm.
- Leadership in action

Why are we collecting this information?
Phase 1 of the REG AMCF survey and reporting portal is intended achieve a baseline of competency information. Once this is complete REG will be able to undertake analytics to better understand sector capability and capacity.

Findings of this process will be incorporated into Phase 2 of the project, which will likely include updates to the typical asset management role types, and communication with employer organisations regarding training options.

Asset Management Competency Framework – Why?

- For individuals – identify your strengths and weaknesses. It's likely you know more than you realise.
- For organisations – build synergies and allocate tasks with a greater confidence across your team.
- For the industry sector – better inform funding and national training conversations.
- Applied Leadership.
